Xamarin **Evolve** 2014

/ Slides and links? /

**<http://bri.gd/brxe14content>**  
(will take you to my GitHub repo)

Who are you?

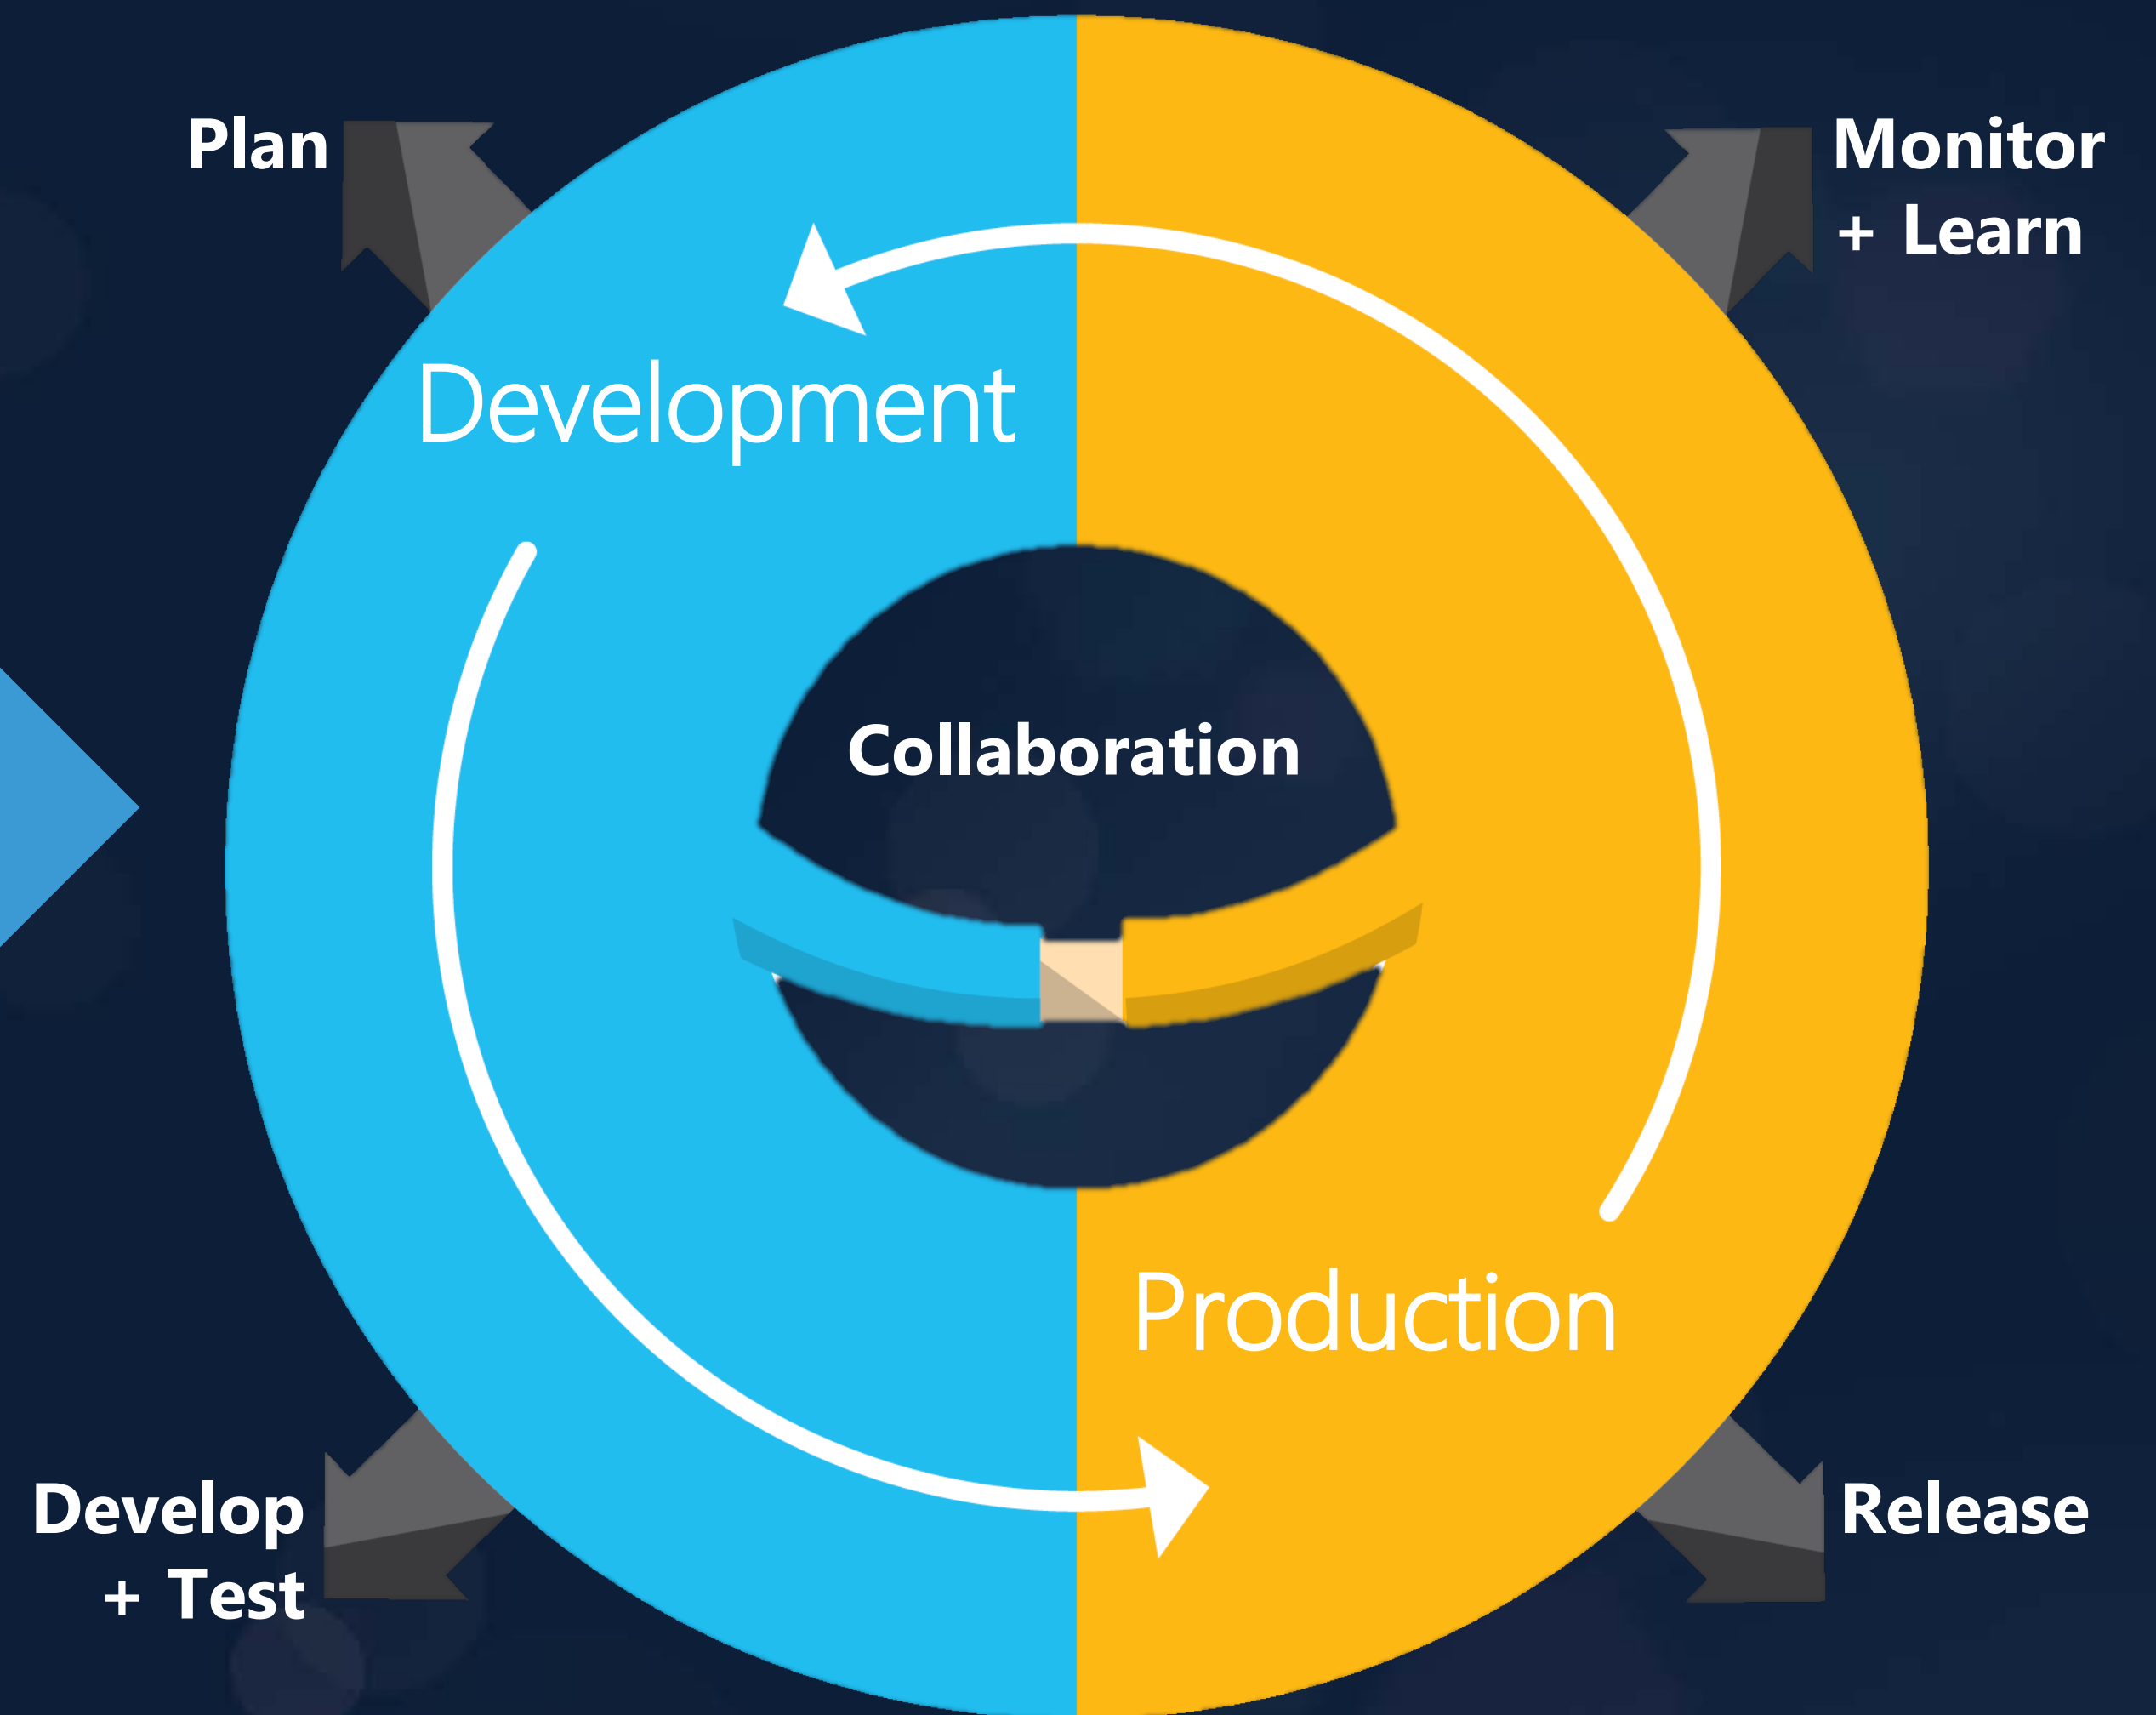

Every company is also  
a software company!

Today, modern software development is all about agility and time to market.

Xamarin Evolve 2014

# What's DevOps?

**DevOps is a full  
lifecycle investment**

**DevOps is a  
team undertaking**

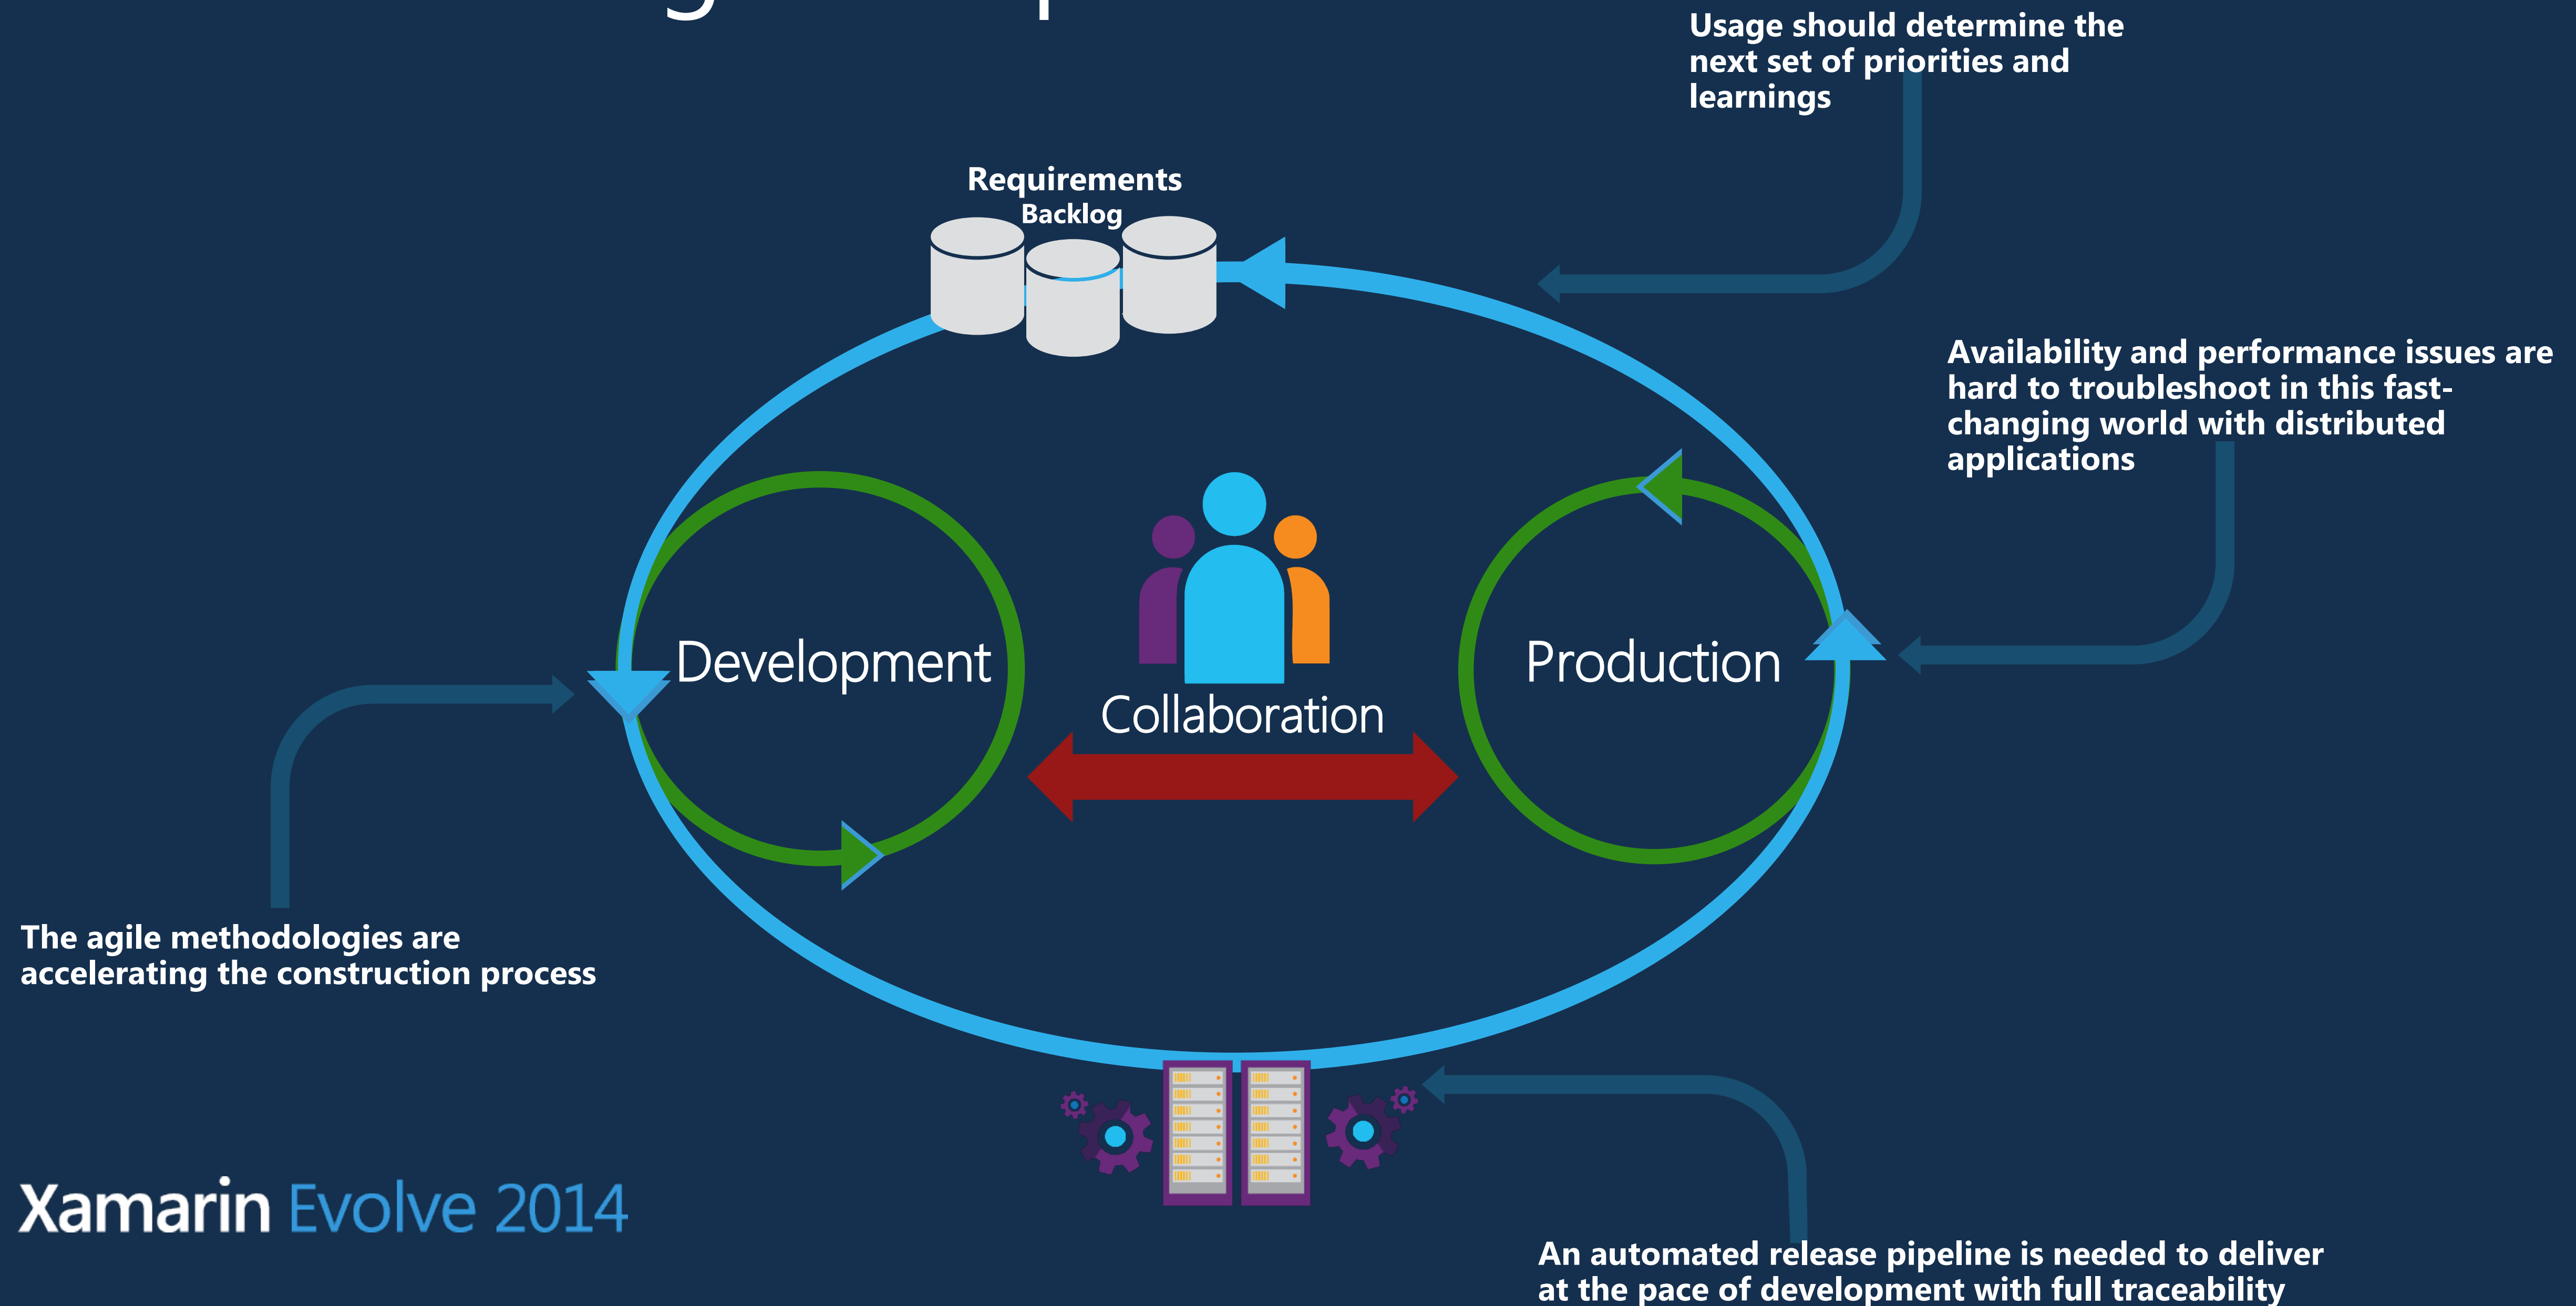

**DevOps enables better  
software development  
and delivery practices**

**DevOps accelerates  
the last mile of  
continuous delivery**

# What's driving DevOps?

# DevOps flavors

## WebOps

**Google, Amazon, Twitter,  
Facebook, Xbox Live, etc.**

## NoOps

**Small web teams,  
start-ups**

## Enterprise DevOps

**Cross-functional  
organizations**

/ 10+ deploys per day /

# 10+ deploys a day

- Automated Infrastructure
- Shared Version Control
- One Step Build and Deploy
- Feature Flags / Branches
- Shared Metrics
- Communication

# People

# Can't we all get along?

- Break down barriers
- Break down organizations
- Yes, start with a virtual team
- Move to “real” devops teams

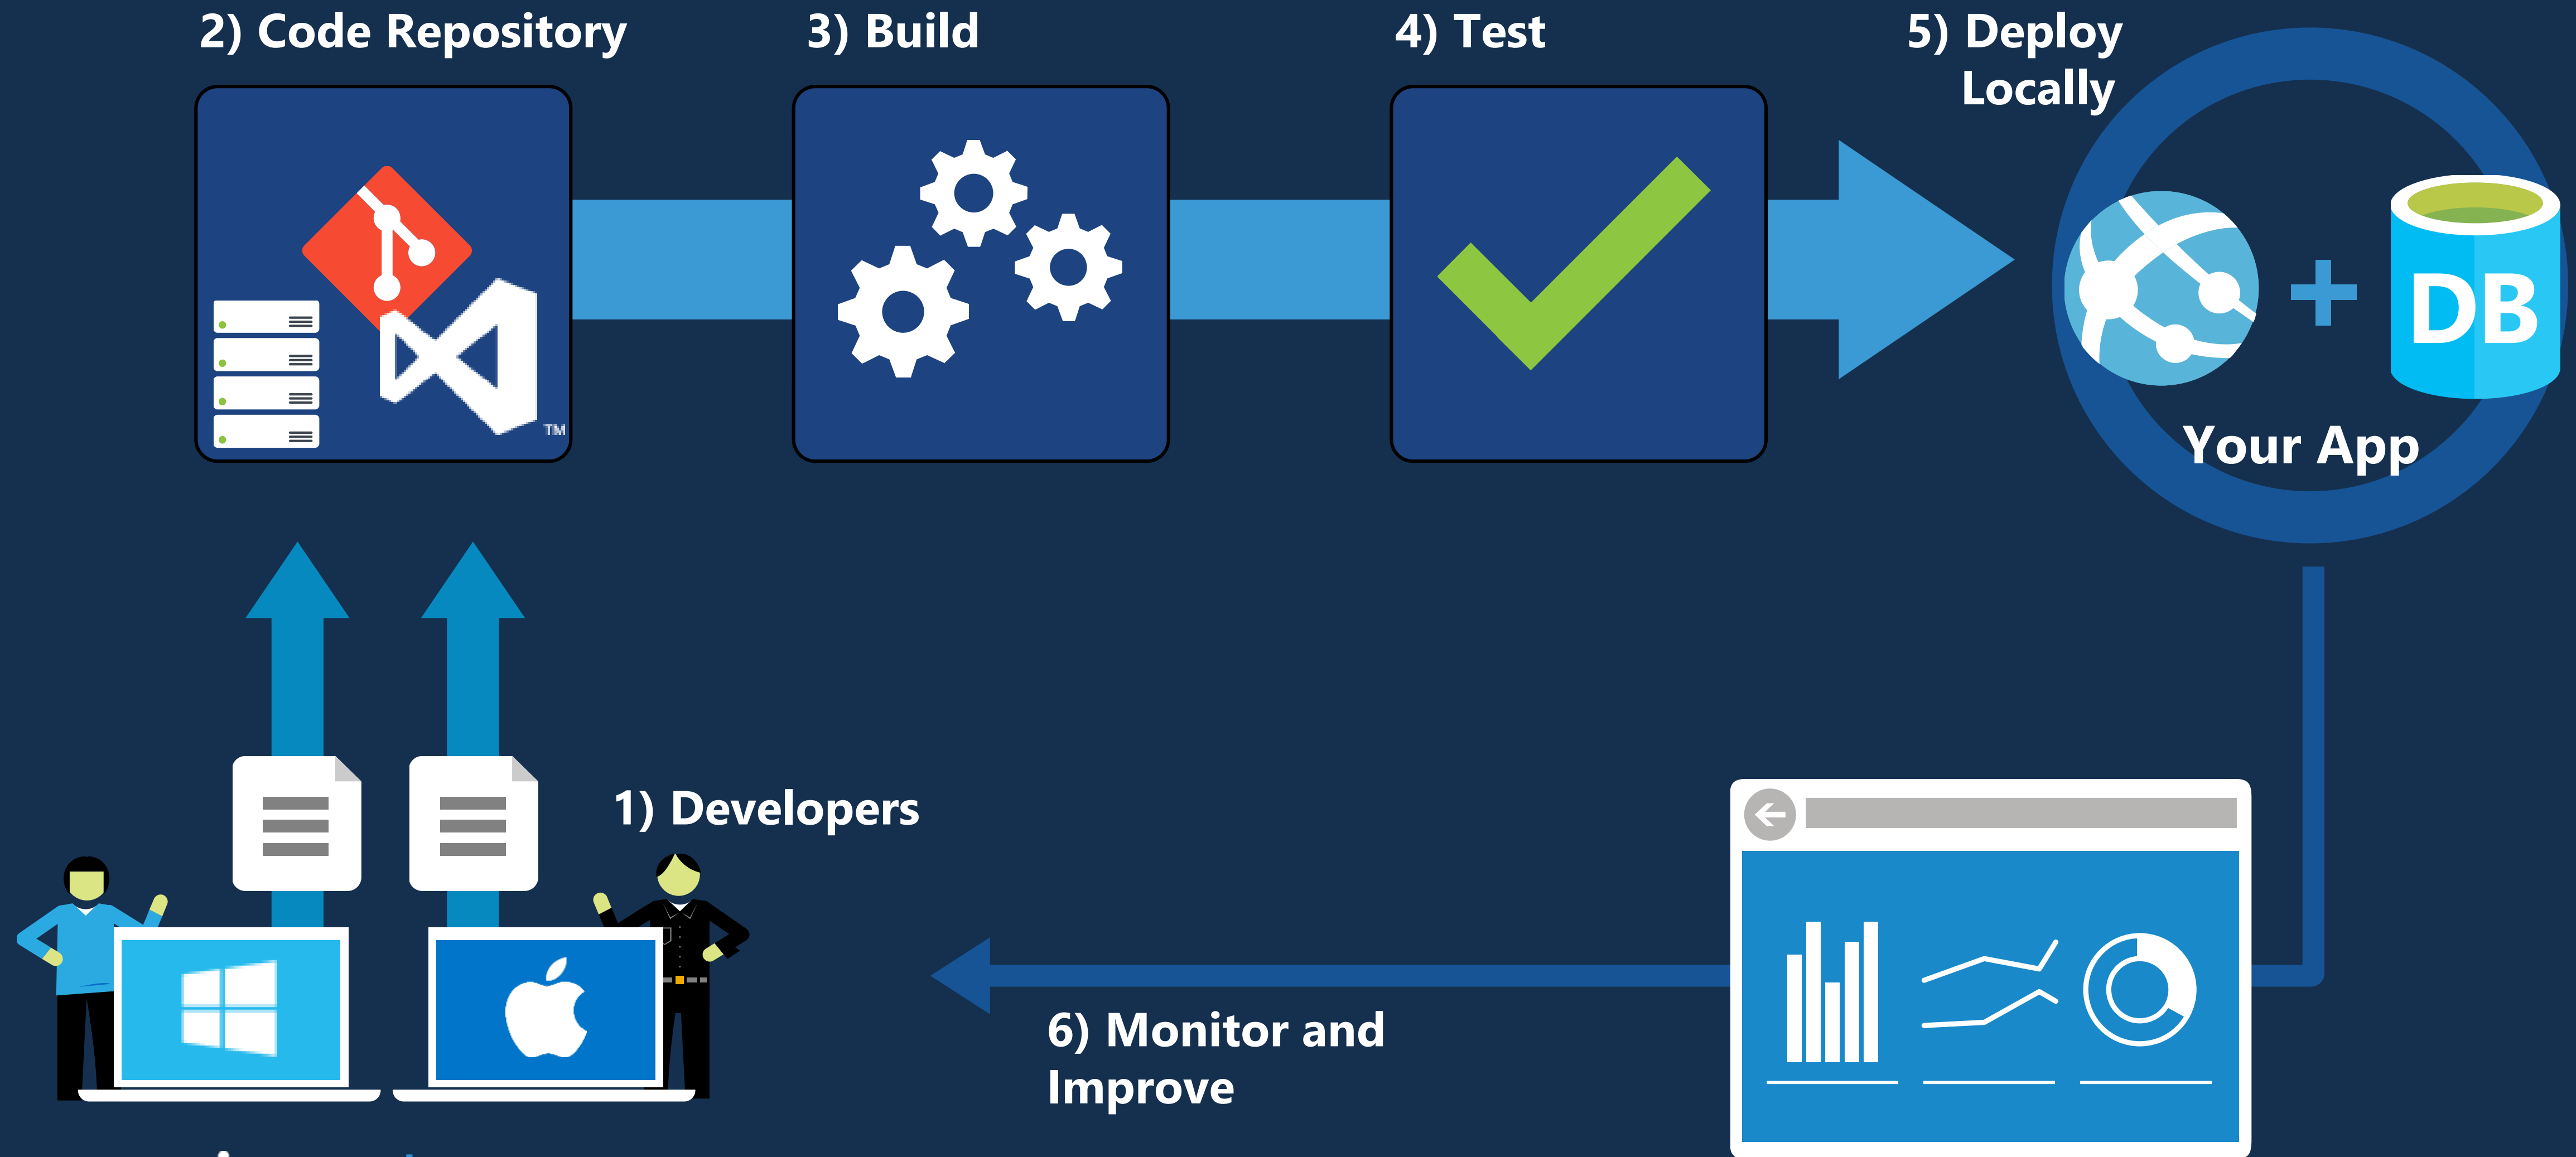

# Interactions

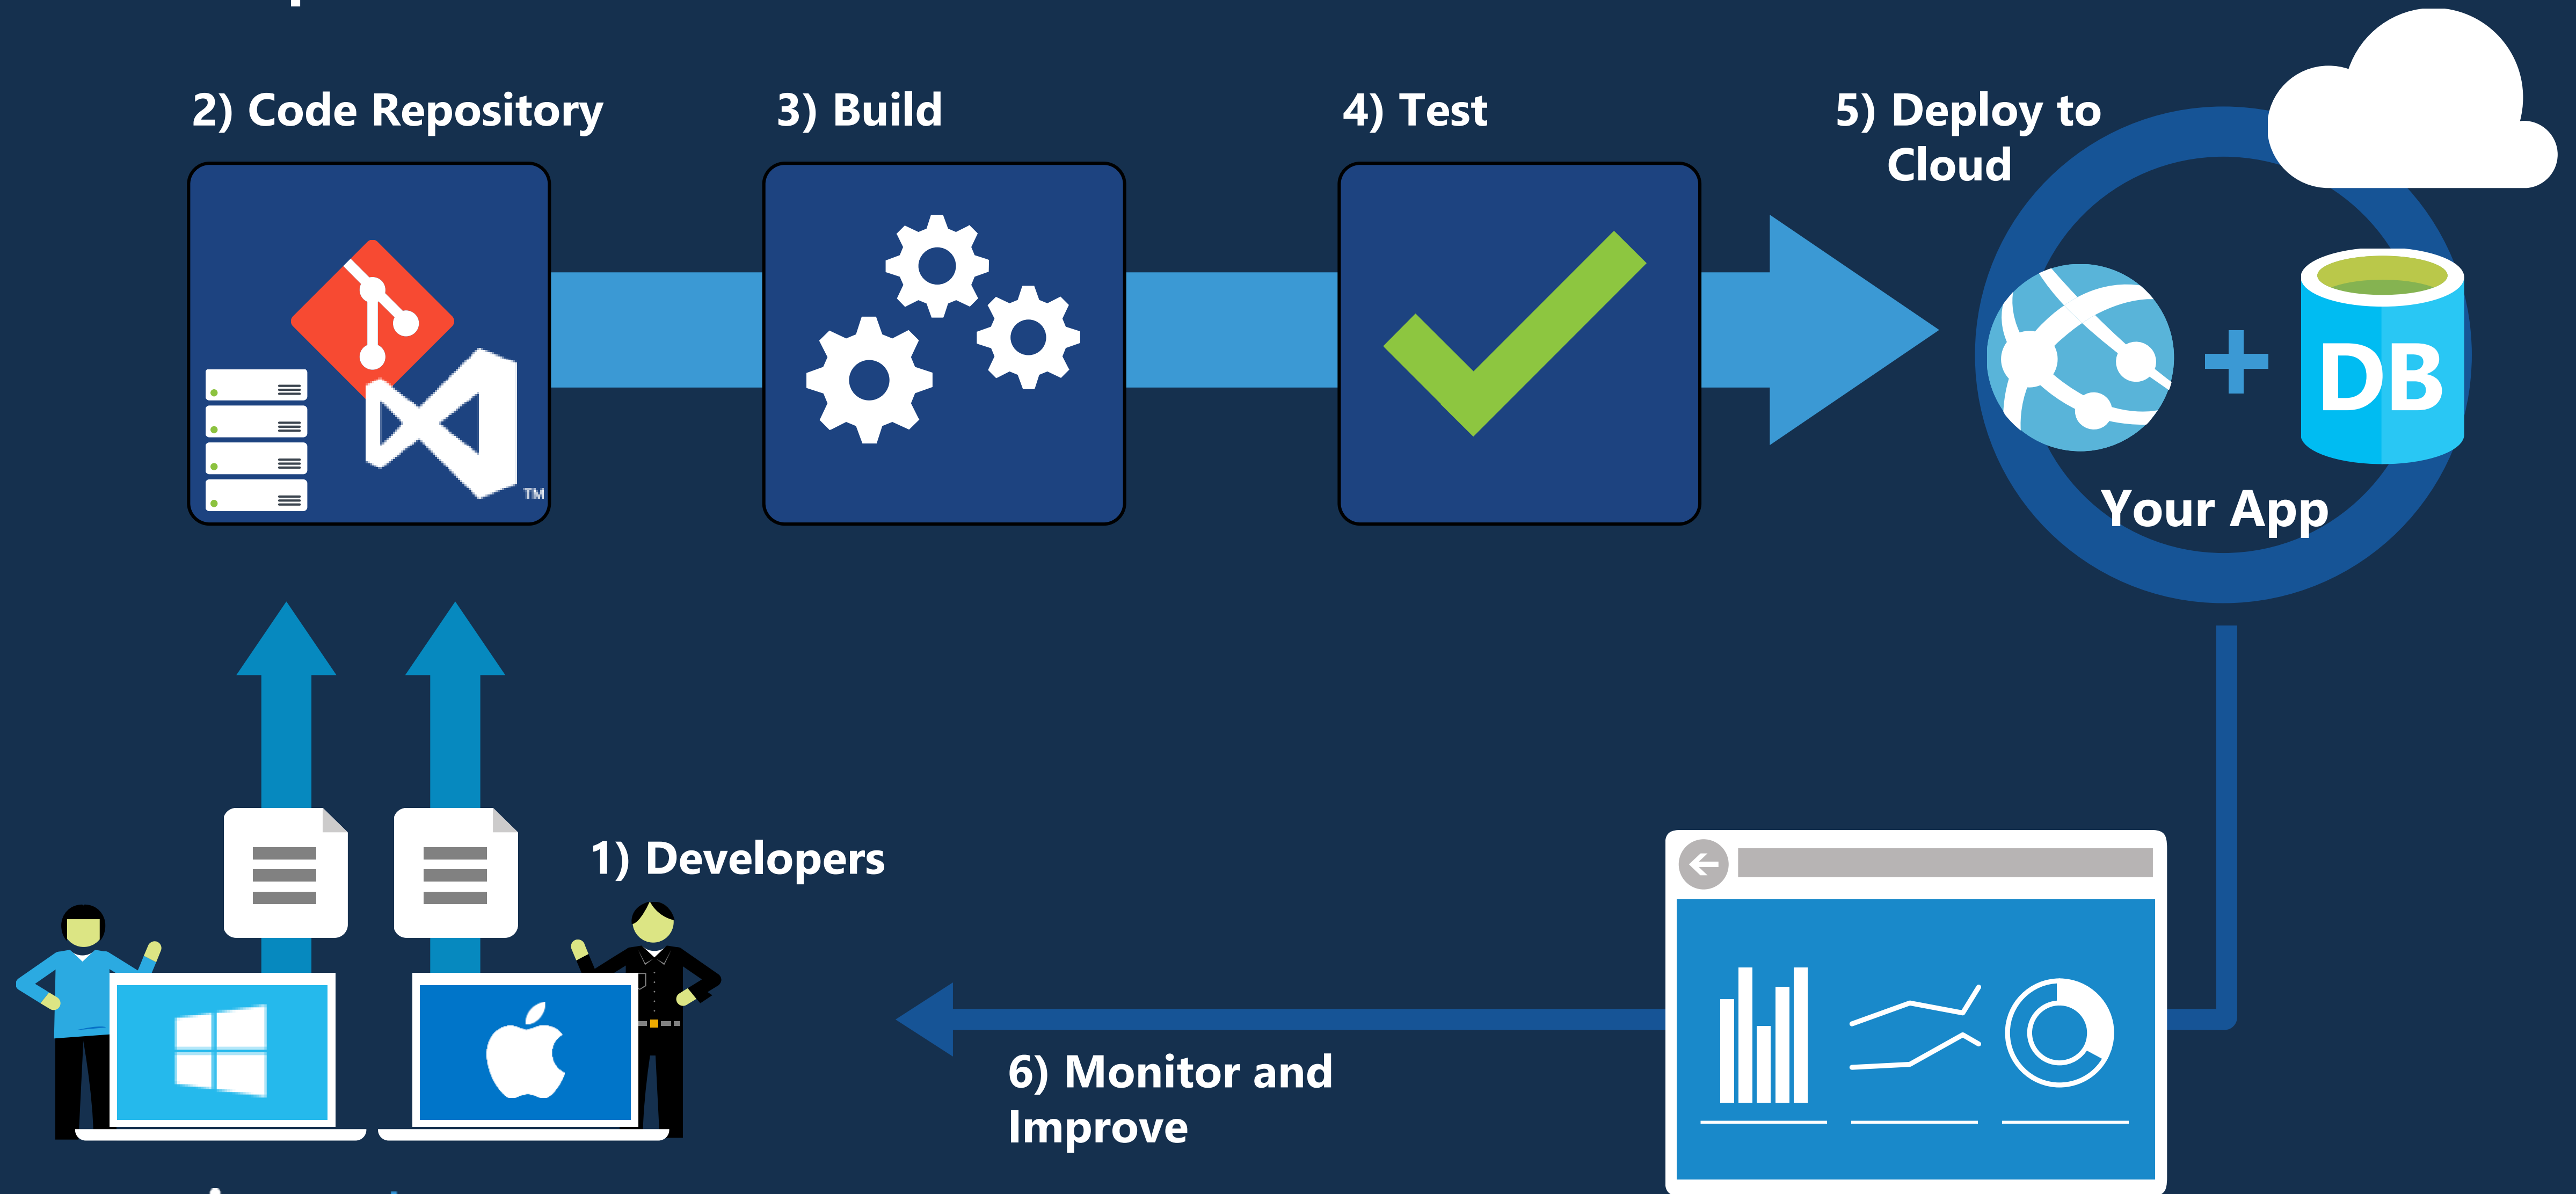

Shorten  
cycle times

# DevOps

# DevOps

# What do you want?

- Consistent
- Repeatable
- Automated

# Focus on the Flow

- Continuous Integration
- Continuous Testing
- Continuous Deployment
- Continuous Feedback
- Continuous Improvement
  
- Continuous Value Delivery

# What about App Stores?

- All of the app stores create some kind of friction
- How do you keep your app in sync with your back end services?
- How do I time updates?

# Versioning Your REST Services

- URL versioning
  - You add a version number into the URL
  - `https://myendpoint.com/api/v2/app/resource`
- Custom request header
  - Same URL, but add some header like "api-version: 2"
- Accept header with content type
  - "Accept: application/vnd.myapp.v2+json"

troyhunt.com

Observations, musings and conjecture about the world of software and technology

Your API versioning is wrong, which is why I decided ways

Monday, 10 February 2014

Like

In the end, I decided the fairest, most balanced way was to piss everyone off equally. Of course the great "tabs versus spaces" debate have I seen so many strong beliefs in entirely different

Imagine this:

```
HTTP GET:
https://haveibeenpwned.com/api/breachedaccount/foo
```

```
Response:
["Adobe", "Gawker"]
```

This was just fine. When I built [Have I been pwned?](#) (HIBP) in late November, it was intended to would use. I think it's fair to say that the first two points were achieved, but not the last one. It week it was [more than Google Analytics could handle](#). The point is that you can't always predict some point you may well need to change something that people already depend on.

But here's the problem – every time you start talking about anything to do with APIs over HTTP

Xamarin Evolve 2014

# What about databases?

- You need rigor in your change management
  - “Data Architects” and DBAs need to be in full sync with “Service Architects” and developers
- You need to consider data migration as well as schema migration
- You might need to modernize your data models for the 21st century

# Tools

# Tooling

- Version Control
- Work Tracking
- Assembling and Packaging
- Deployment
- Monitoring
- Analytics

# Demo

# PreEmptive Analytics

Consumer, B2B, B2C and distributed enterprises)

## APP TYPE (Runtime/Device support)

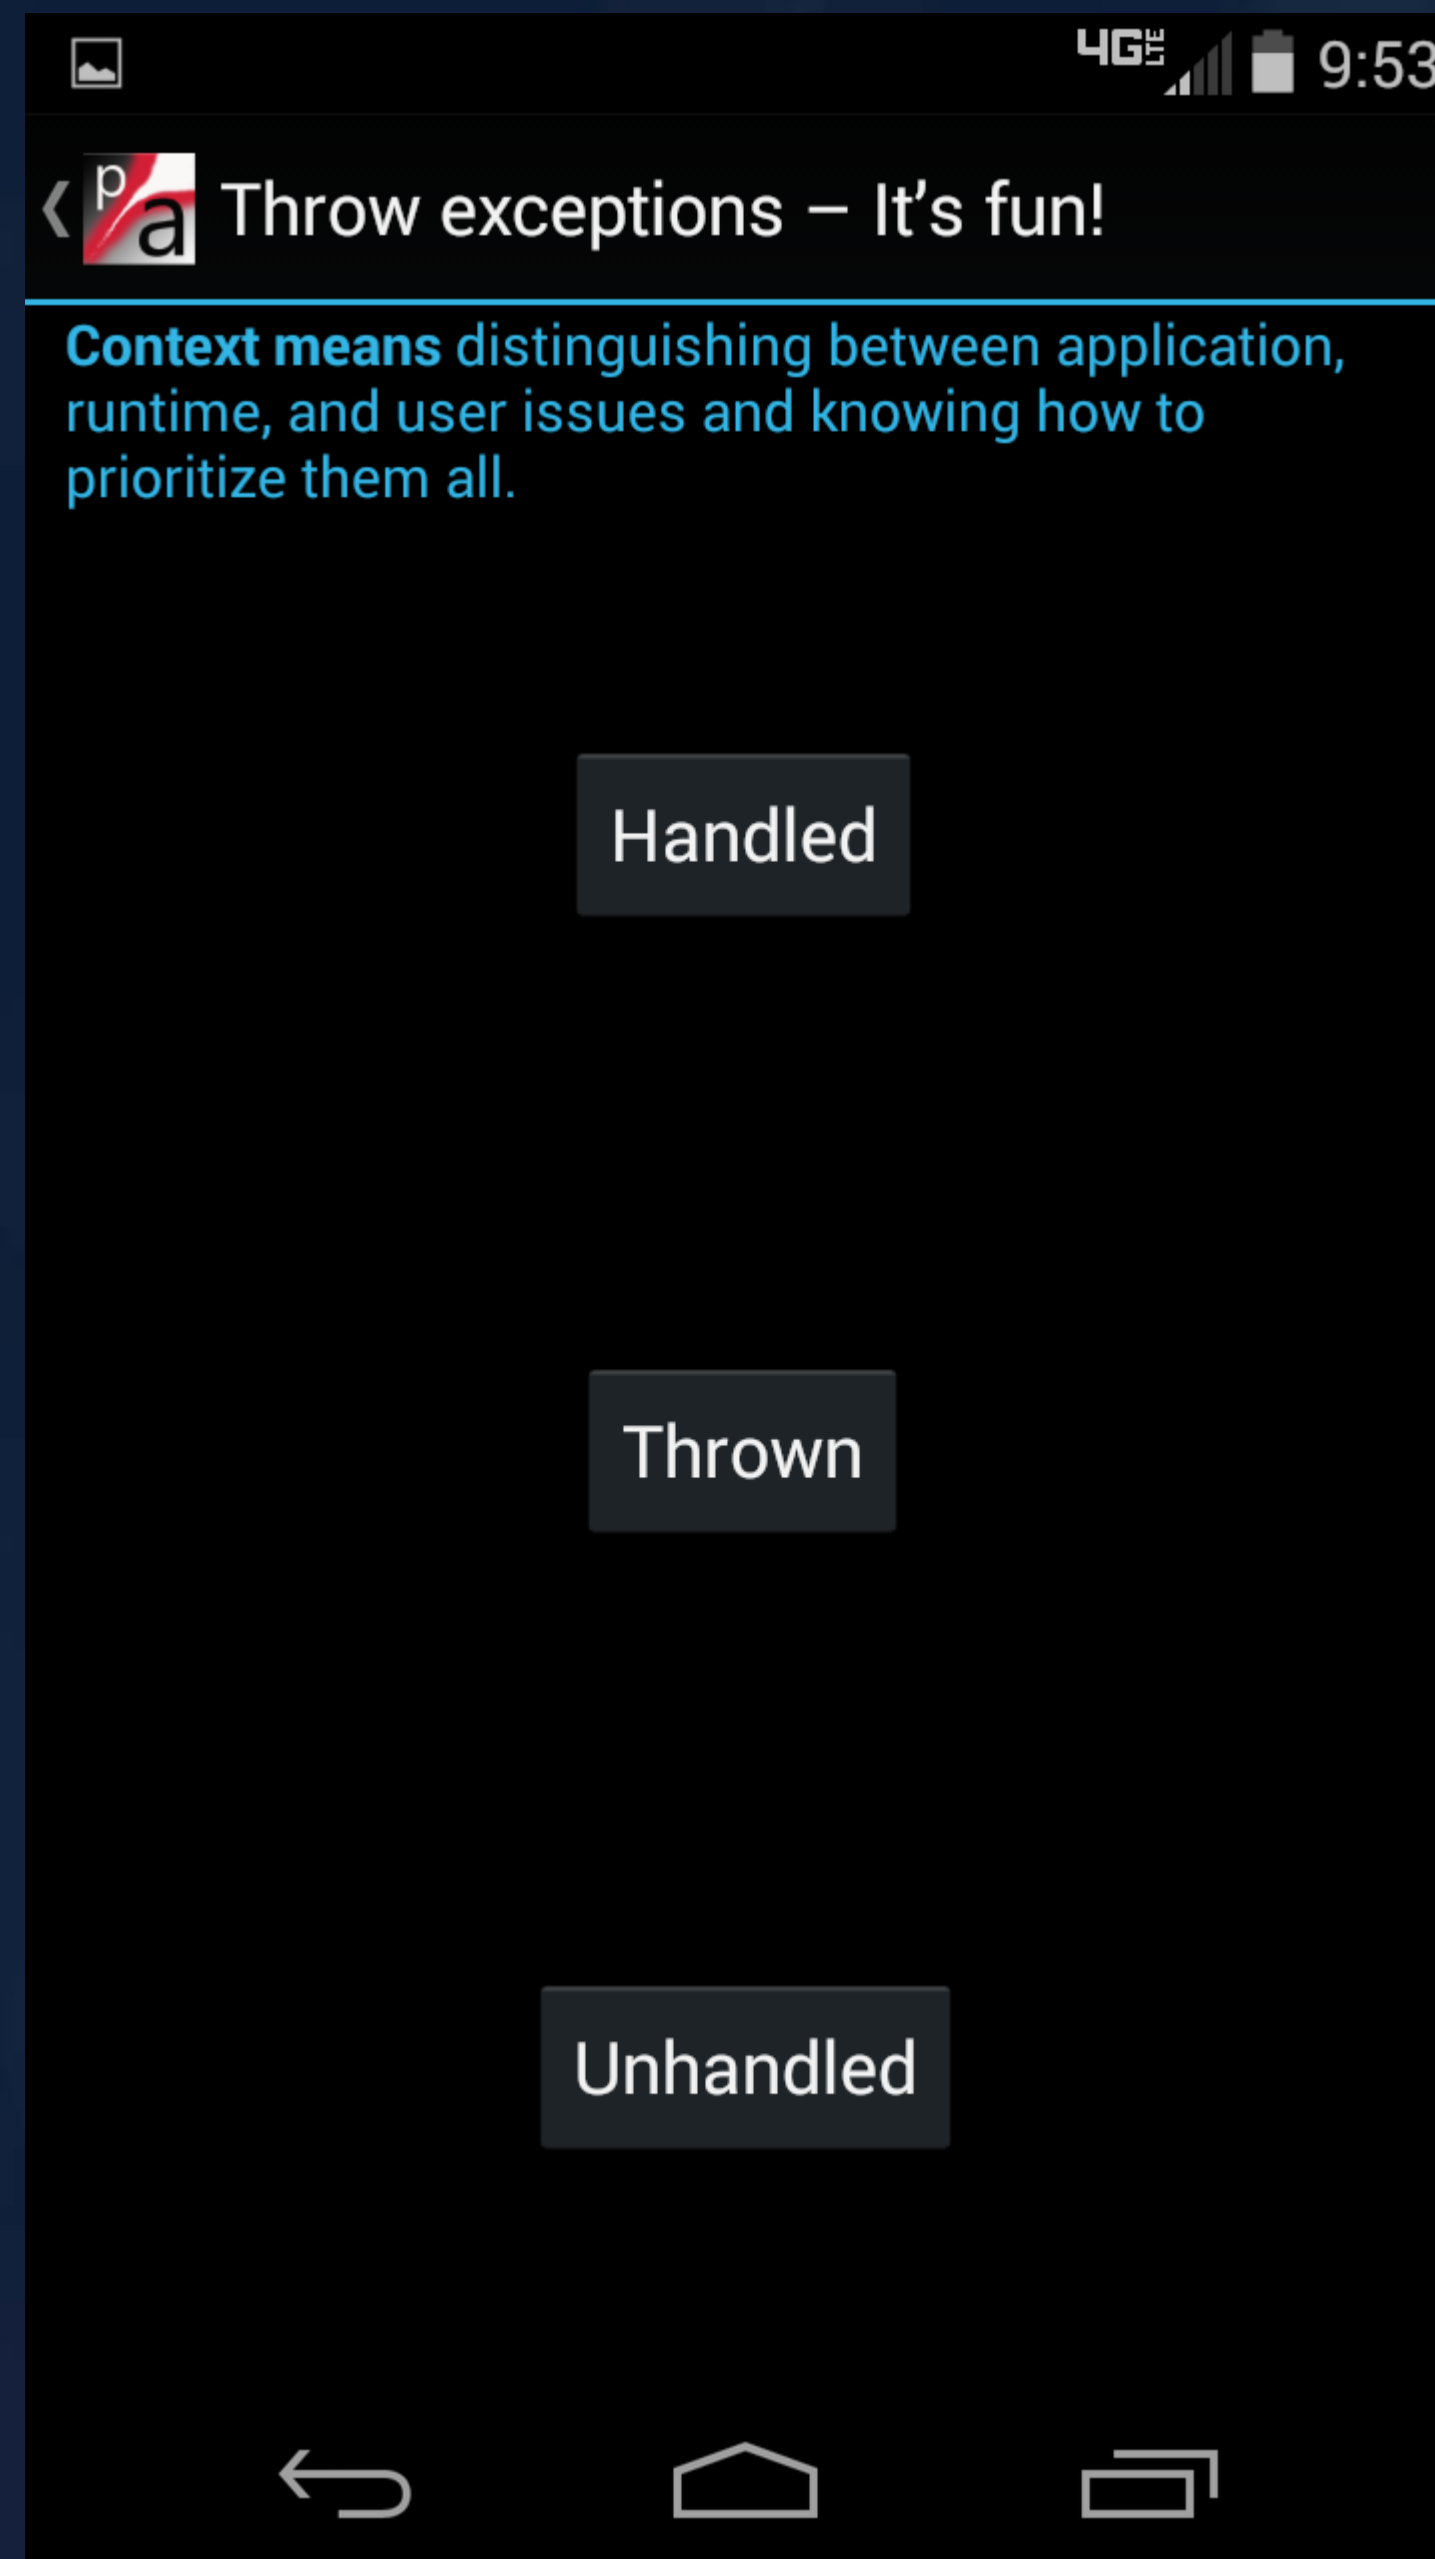

- All existing .NET, C++, and JavaScript Apps
- All MSFT modern surfaces (WinRT, WP, & JavaScript)
- Popular mobile options (iOS & Android)
- Cross-platform dev tools (Xamarin)
- Other non-MSFT runtimes (Java)

## USER TYPE (Application "Domain")

- Enterprise LoB
- Business-to-Business and Business-to-Consumer
- Commercial ISV

## DEPLOYMENT TYPE (Network infrastructure)

- Public (Internet), Private (corporate), Isolated (remote)

# Final thoughts

- Modern DevOps is about People, their Interactions, and finally Tools
- Think about your mobile solutions holistically—your apps PLUS services
- Continue to evolve

thank you  
modern  
evops
